

KENT COUNTY WATER AUTHORITY DATA LOGGER INVESTIGATION REPORT

Name	XXXXXXXX				
Service Location	XXXX Dr. Coventry, RI				
Account#	107472				
Serial #	1565591790				
Meter size	5/8"				
Was the meter recently changed out	YES	NO	on	3/5/2020	(see attached)
Final read on old meter	31693		on	3/5/2020	(see attached)
Last reading previously billed	30611		on	12/24/2019	(see attached)
Total consumption on old meter	1,082				
Total consumption on new meter	404				
Total consumption billed	1,486		Billed 4/30/20		
Present Quarterly bill amount	10/31/2020	\$213.31	for	3,253	cubic feet

Data Logger Explanation:

The Neptune R900 meter stores information up to 90 days of hourly consumption. The information can be downloaded to be viewed in cubic feet per hour or per day.

The graph presented represents daily use in total cubic feet.

A red bar on the graph indicates that the account has been flagged to have an intermittent leak or continuous leak. An intermittent leak is defined as continuous flow for 15 minutes for 50 out of 95 measurement intervals in a given day.

A continuous leak is defined for as continuous flow for all 96 measurement periods.

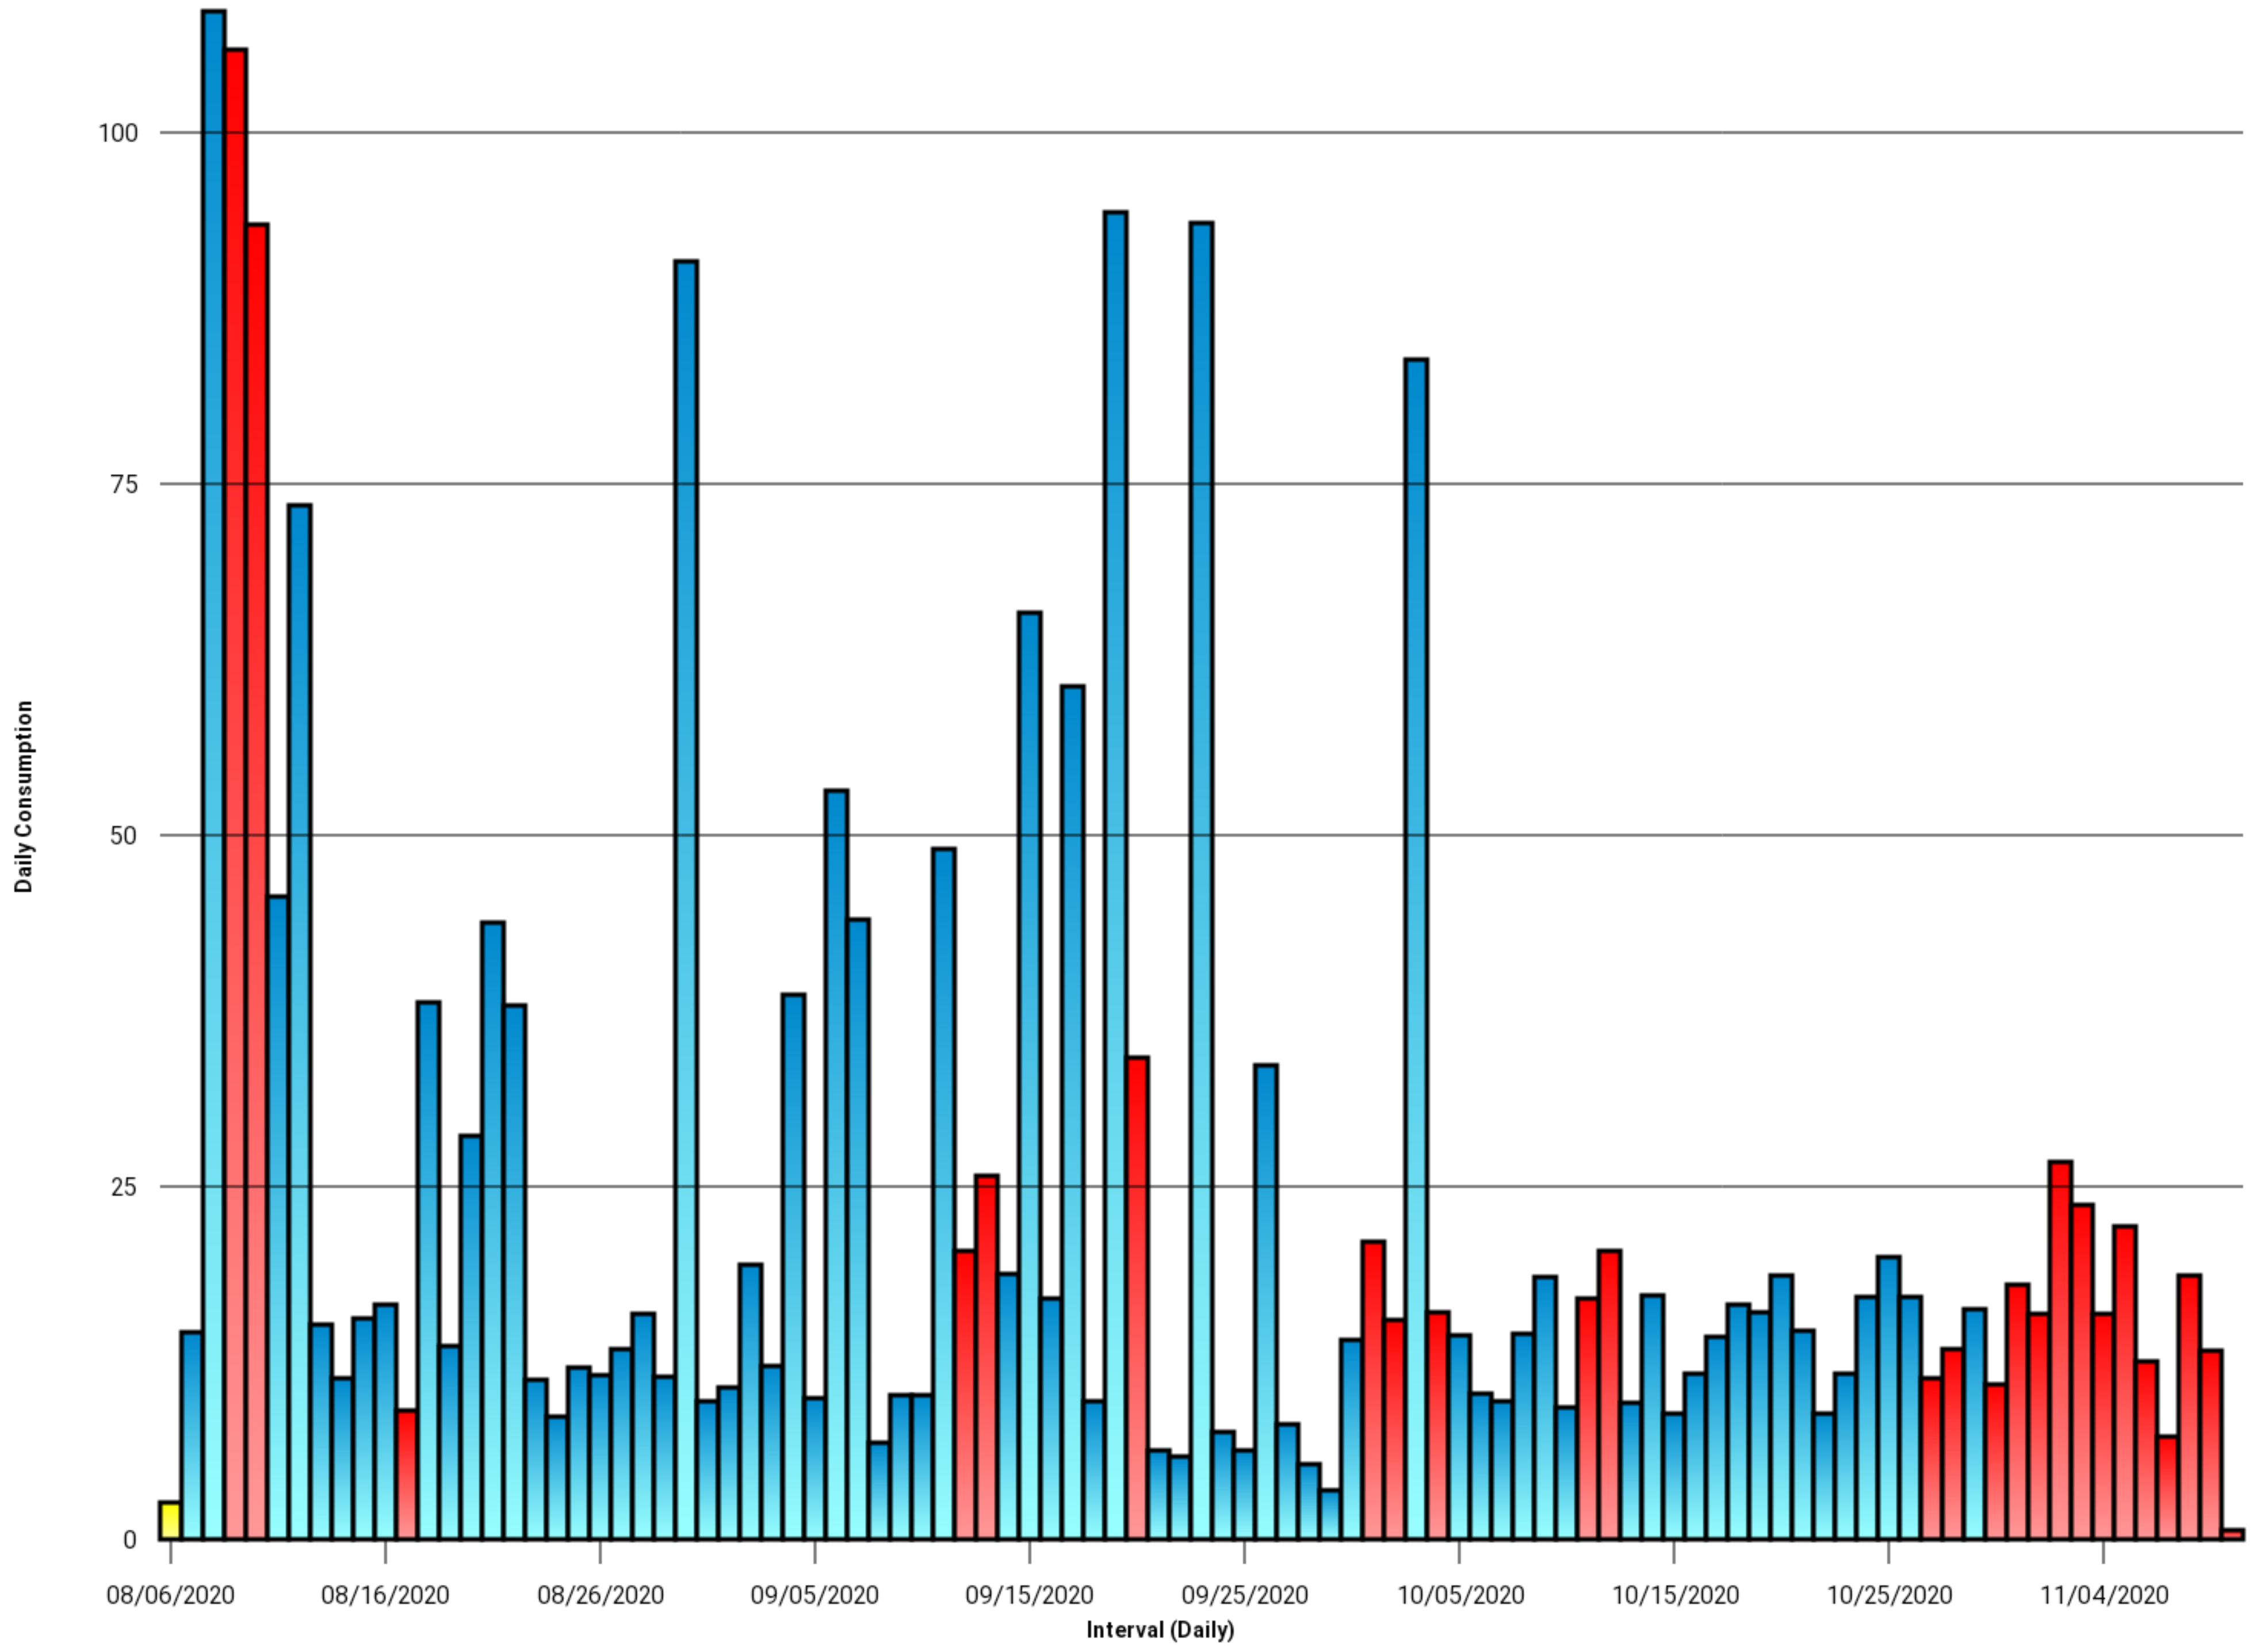

A blue bar represents normal use.

A yellow bar represents partial data collection on a given day. Usually at the start and the end of a datalog interval.

A gray bar indicates that there was reverse flow through the meter of 0.1 cubic foot. This is often the result of when a customer does not have a backflow preventor installed and they have an expansion tank on hot water systems causing small intermittent backflow conditions through the meter. Backflow conditions are a public health issue and should be addressed by a licensed plumber.

KCWA HAS DETERMINED YOUR BILL IS CORRECT
